

**To keep an eye on  
your assets fast, talk to  
the leader in the field.**

**Anything's possible.**

From SAP to MYOB users, organisations find integrating the Asset Tracking Tool (ATT) into their management regime provides significantly faster and more accurate feedback regarding their asset tracking and stock control.

Following the demise of American corporations such as WorldCom and Enron, and local companies One-Tel and HIH, many organisations are now focused on stricter corporate governance. The Sarbanes-Oxley legislation passed in 2002 in the USA, and the equivalent CLERP 9 legislation in Australia, was introduced to ensure improvements in the implementation and reporting of honest and auditable corporate practices are met.

ATT enables organisations to meet depreciation and accounting standards, cost centre allocation, accountability and theft management while negating the requirement for paper-based processes.

The ATT works with any major Finance or ERP system by extracting asset information and transferring it to a hand held computing device. An asset stock take or tracking session is then performed and up to the minute information regarding assets is collected.

Often the information collected during a tracking session includes asset location, cost centre allocation, serial numbers and up to 40 additional fields of data. A notepad feature allows even more data to be recorded. The ATT solution takes the updated information and uploads it back into the financial system eliminating the need to maintain a separate asset register.

While the ATT solution was traditionally a bar code based tracking solution, Radio Frequency Identification (RFID) technology has significantly enhanced the possible uses of the ATT. As RFID does not require Line of Sight to work, artworks and artefacts are no longer defaced with a bar code and documents are easily tracked even inside locked drawers. Both bar code and RFID technology can be used simultaneously.

And to make the ATT solution even more attractive is most organisations find that it will pay for itself within the first two years.
