

**In 8 years we've taken on  
The Government,  
large multi-national corporations  
and small businesses.**

**TIG**

**Anything's possible.**

Eager to pave the way into the next century, a group of software engineers got together in 1997 and began designs to fill a niche gap in the rapidly growing ERP market.

A need had become evident for the integration of bar code scanning systems for accurate data capture in many industries. While such companies could readily procure scanning hardware to suit their requirements, they had great difficulty in finding someone to fully integrate the technology into ERP systems.

TIG provided the answer and has remained the clear leader in data capture integration ever since.

Within twelve months of its inception, TIG had official certification processes underway from the world's largest ERP provider. This certificate would testify to the future solidity of all TIG software solutions.

By offering the kind of product and technological innovations demanded by companies who are constantly tuning their processes for maximum productivity, TIG was the first to offer seamless integrated bar coding and RFID functionality to the warehouse and finance modules of major ERP systems.

TIG specialises in software consultation and design, hardware procurement, bar code labels and RFID tags. TIG also provides thorough Service and Maintenance guarantees.

TIG's ongoing success can be tracked around the globe with installations in Australia, New Zealand, the United Kingdom, Europe and the USA. Worldwide partnerships with hardware vendors, major ERP implementers and our sister company, TIG Europe, located in the UK, means TIG is well positioned to provide the best possible solutions for their customers.

Looking to expand, TIG's new corporate head quarters, located at Norwest Business Park in Sydney's north, symbolise a stimulating and meaningful future for the company and its valued clients.

Heading towards 2010, TIG's main focus is to offer far superior data capture solutions to any competitor in the space. At TIG, anything's possible.
